Subject: Microsoft Settlement

The proposed judgement benefits only Microsoft.

By continuing Microsoft's monopoly technical inovation will be stunted.

An adequate remedy: Make the APIs and file formats of any operating system, application program, internet program, ... that has more than 10% (?) market share subject to industry wide standards. Include a provision insuring no single firm can have more than 25% (?) membership on each standards committee. Obviously, numeric details and safeguards must be worked out.
